

User Experience/web application Developer

Description:

This is a user experience/web application Developer role at Pixable, a rapidly-growing startup that is changing the game in the personalized photo books / photo products market

The Ideal Profile:

We love to see candidates who have worked on impressive web applications that they can demonstrate for us. We favor candidates who can show us they have a keen product sense and will contribute good ideas for improving the product.

Your Role:

Balance innovative new features with performance and speed for optimal user experience. Think creatively about the future of Pixable, generate feature ideas, and implement them.

Qualifications:

- Passion for building a great product that everyone will love – your friends and family will be in awe.
- Must have a good sense of aesthetics.
- Expert knowledge of XML/HTML/DHTML/CSS with focus on cross-browser compatibility and semantic markup.
- Very strong object-oriented development skills. Must be fluent in front-end programming language including, but not limited to PHP, JavaScript, AJAX, and familiar with one or more JavaScript libraries (eg. JQuery) .
- Experience in a rapid prototyping environment.
- Must have experience with Web 2.0 technologies and previous User Experience projects.
- 2+ years development experience.
- Strong communication skills – be able to communicate and work as a team.
- Extremely hard working. This is a start-up – long hours should be afraid of you because you own them.
- Familiar with unit testing, design patterns and component lifecycle development.
